### OBJECTIVES

Conference on Advanced Materials and Technology for Environmental Protection and Sustainable Development (AMTECT2021) is the premier interdisciplinary forum for presenting and sharing new advances and research results in applications of advanced nanomaterials and technology for environmental protection and sustainable development. Advanced materials and technologies can be applied for environmental remediation, energy storage/conversion, CO<sub>2</sub> storage/conversion, water splitting, climate change mitigation and adaptation. The conference will bring together researchers, engineers and scientists in the domains of interest from all parts of the world, and foster ideas exchange between participants. With passionate attendees from research and educational institutions around the world, AMTECT2021 would be a perfect opportunity to showcase their latest and exciting innovations, interact with distinguished scientists, and look for potential collaborations.

Potential topics include but are not limited to the following:

- Advanced materials for environmental remediation, green growth and green chemical processes
- Technologies and strategies for reducing greenhouse gases and biofuel production
- Contaminated soil management
- Advanced nanomaterials for effective, environmental-friendly, and sustainable agriculture in accordance with low carbon agriculture orientation
